Summary

Software developer with hands-on experience building and deploying full-stack mobile and cloud-connected applications. Experienced with React Native, TypeScript, REST APIs, databases, AWS, Firebase, and Supabase. Built and published a production mobile application and developed IoT systems integrating device telemetry, cloud processing, backend services, and mobile clients.

Education

Chandigarh University Mohali, India

Bachelor of Engineering in Electronics & Communications *Aug. 2022 – June 2026*

- CGPA: 7.89/10 (First Division with Distinction)

Experience

Meander Software Private Limited Mohali, India

IoT Developer Intern *Jan. 2026 – Apr. 2026*

- Developed a React Native dashboard for real-time monitoring of connected devices, integrating device telemetry through cloud APIs.
- Developed AWS Lambda functions and Firebase-based data pipelines for processing device data and connecting IoT services with the mobile application through MQTT and REST APIs.

Projects

Caloriee – AI Recipe Generator & Calorie Tracker 2026

React Native, Expo, Supabase, Firebase / *Google Play*

- Architected and shipped a cross-platform mobile application end-to-end, from data modeling to Google Play release, for personalized recipe generation, meal management, and calorie tracking.
- Designed a PostgreSQL schema and Supabase authentication layer to securely manage user profiles, meals, recipes, and application data at scale.
- Built a client-side notification system by integrating Firebase Cloud Messaging with the React Native application.

NileCart – Multi-Vendor E-Commerce Platform 2026

React (Vite), Tailwind CSS, Shadcn UI, Supabase | Live Demo

- Built a full-stack marketplace platform with distinct buyer and seller roles, covering product browsing, cart management, and order confirmation.
- Designed a seller onboarding flow, including product upload, editing, and inventory management, with checkout handled through direct WhatsApp contact with the seller.
- Implemented an admin verification workflow that validates seller national IDs in Supabase before granting selling privileges, safeguarding marketplace trust.

IoT-based Food Monitoring System – Backend & App 2026

React Native, Firebase, AWS Lambda, AWS IoT Core / *GitHub*

- Built an event-driven backend on AWS IoT Core and Lambda to ingest, validate, and process real-time telemetry into actionable freshness statuses.
- Designed a Firebase Firestore data layer to persist monitoring data and power threshold-based alerts via Firebase Cloud Messaging.
- Developed a React Native dashboard that consumes processed data through REST APIs to surface real-time device status to end users.

Technical Skills

Languages: C++, Python, TypeScript, JavaScript
Frontend & Mobile: React, React Native, Expo, Vite, Next.js, HTML5, Tailwind CSS, Shadcn UI
Backend & APIs: NestJS, REST APIs, Supabase, Prisma,API Integration
Cloud & IoT: AWS Lambda, AWS IoT Core, Firebase, MQTT
Databases: PostgreSQL, Firestore
Tools: Docker, Git, GitHub, VSCode, Postman, Figma

Languages

Arabic: Native | **English:** C1
